

Building the HG|SF technical assistance plans

The Multisectoral Approach: Linking School Health and Nutrition,
School Feeding and Local Agricultural Production
Accra, Ghana, June 1-5.

Aulo Gelli, PCD.

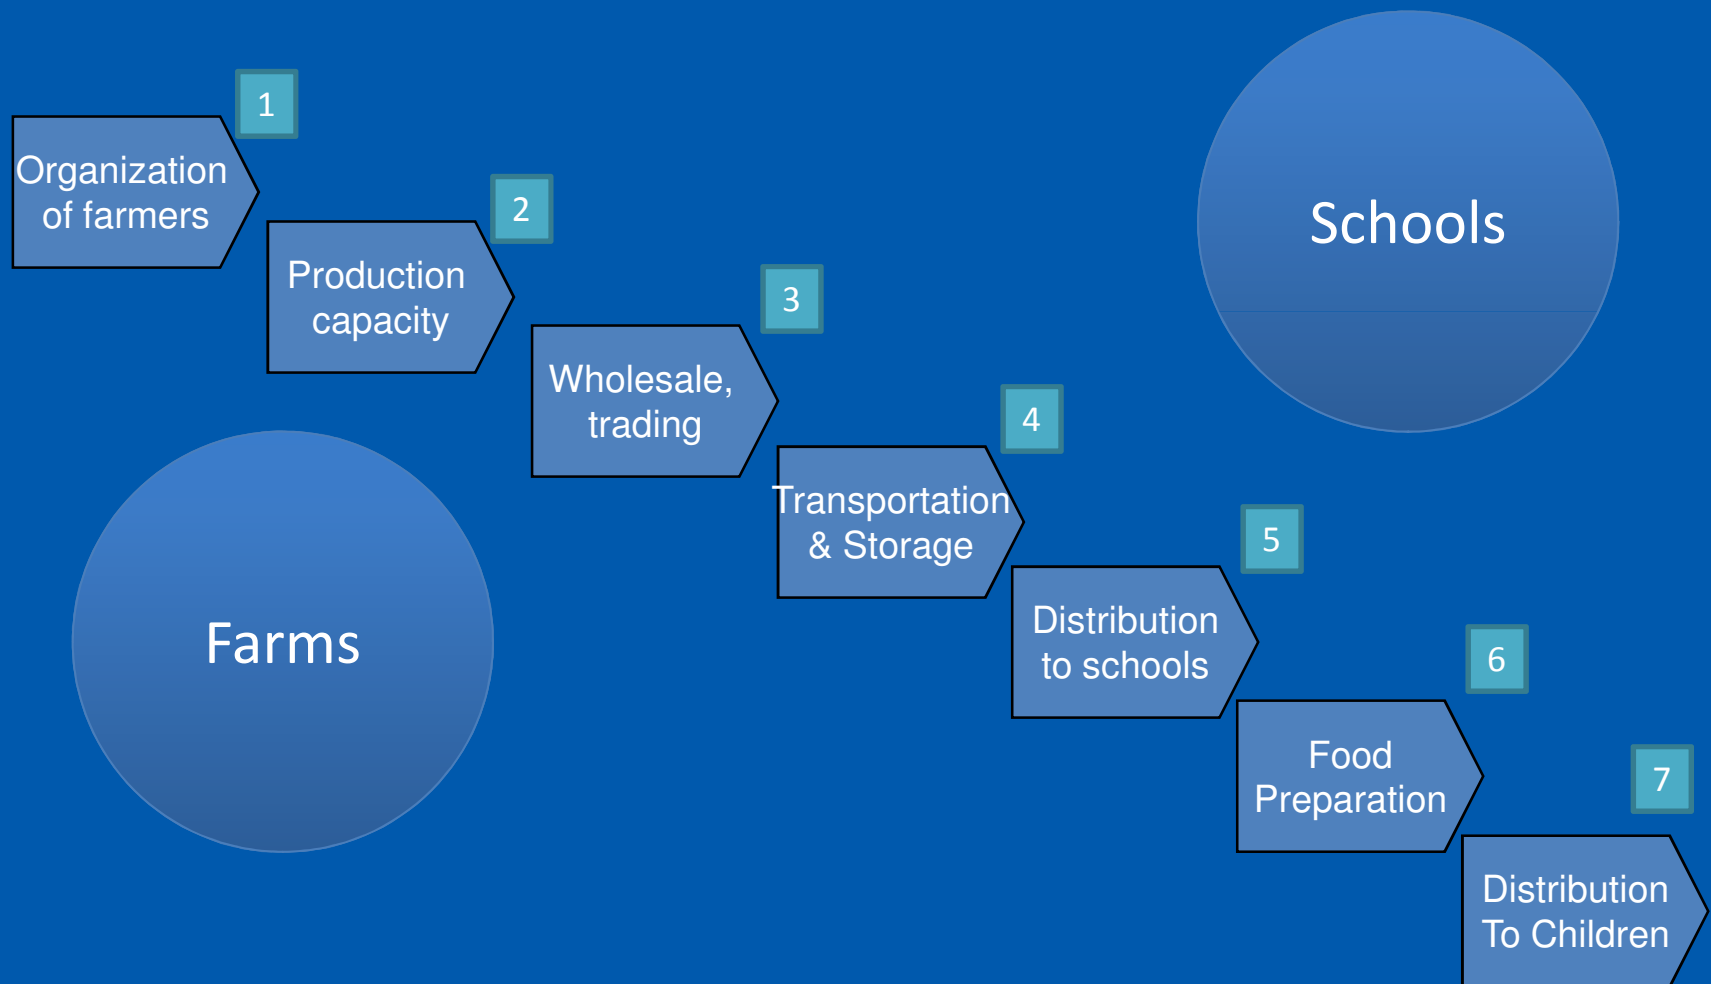

Agenda

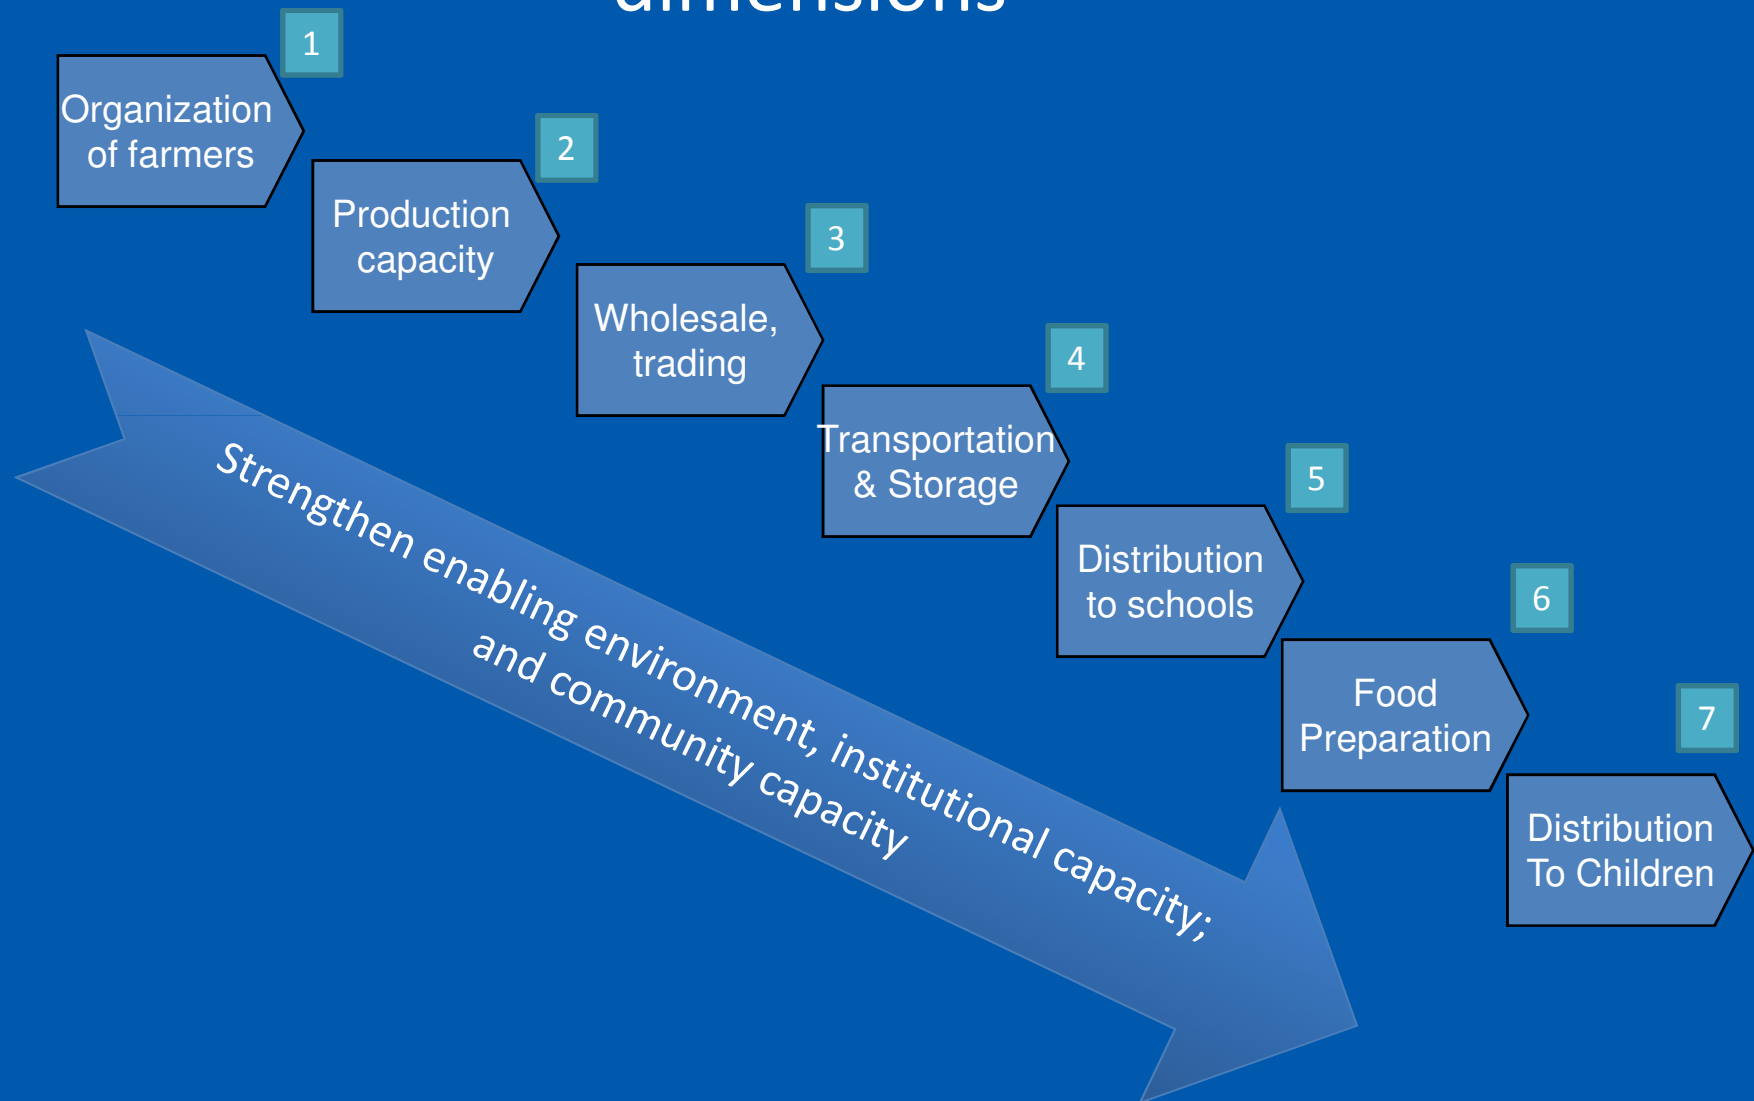

1. Background
2. The planning process
3. Emerging lessons

HGSF framework for analysis:

In each country, understand the supply chain linking farms to schools

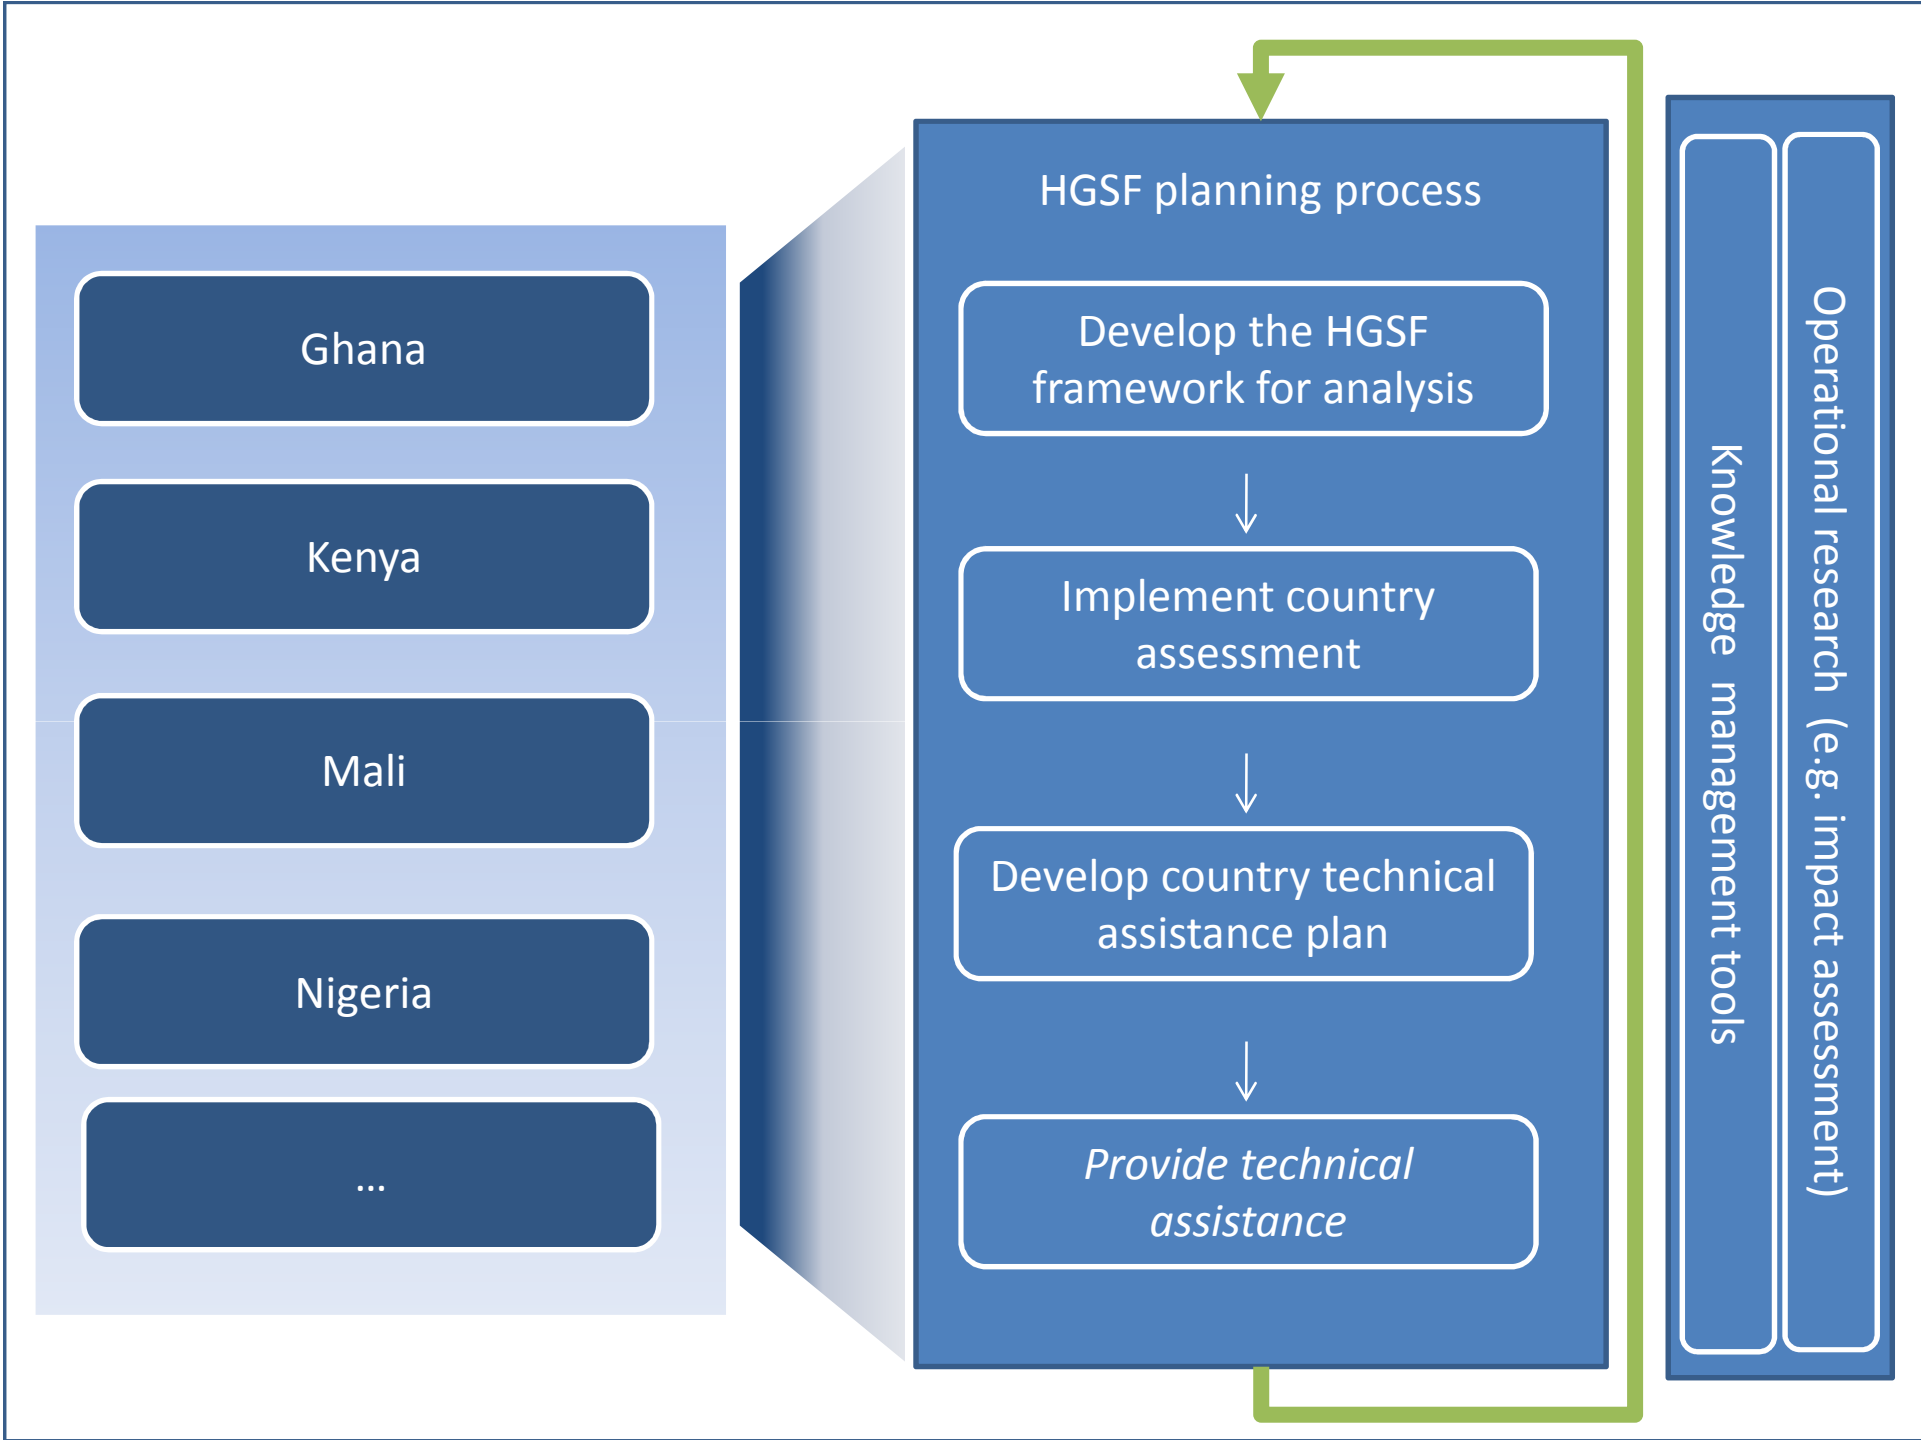

Work across HGSF Framework, enabling environment and capacity development dimensions

Steps by step planning process

1. What is HGSF? Develop HGSF framework for analysis
 - needs and target group
 - overall aims and objectives
 - linkages between activities, outputs, outcomes and objectives
2. Gap identification
 - Assessment of current state of implementation
 - Identification of needs/gaps across HGSF framework and enabling environment
 - Stakeholder mapping
3. Planning the technical assistance
 - Description of activities needed to address needs/ gaps
 - Identify high level timelines, budgets and implementing partners

Aim at facilitating interaction

- Provide a multisectoral space for different stakeholders to interact from the beginning, including:
 - Education, health, nutrition, agriculture ...etc...
 - Policy makers, practitioners, research, media ...etc...
- Time and space to strengthen the partnerships
- Catalyse action on the ground

Emerging lessons across 4 countries...

- What is HGSSF?
 - Emphasis so far has been primarily about national *ownership*
- 3 target groups
 - School children, small scale farmers, community groups
- Impact theory includes education & food security indicators
- Gap: capacity building activities are integral component of HGSSF design
 - HGSSF requires explicit agriculture and community development component if it is to provide desired impact on food security and education

Thank you!
